

Google Fonts

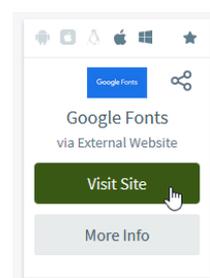

Online Resource

On your own device, and on UWE computers, access through AppsAnywhere to an external link. Follow the steps below

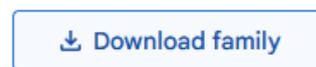

Step 1

Go to <https://appsanywhere.uwe.ac.uk>, log in, and look for Google Fonts, click **Launch** open the external link in a new tab.

Step 2

Browse the font families, or search for a specific font. Once a font is chosen, select 'Download Family' in the top right of the screen, to save a local zipped file.

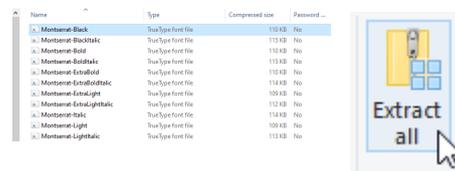

Step 3

Extract the zipped file - at this point we would recommend saving any files you wish to keep to OneDrive.

Step 4

Open the extracted folder, and double-click the font you wish to use to open a preview window. Select 'Install' at the top to move the font onto this PC, and start using it.

Step 5

Please note, if you use a non-system font in your project, you may need to install it on each computer to use.
